## Care & Handling

### Storage

Galvanized steel sheets have a good service life when exposed to normal weather conditions. However, these sheets are subject to stain when water sits upon or becomes trapped between the sheets.

If galvanized sheet are to be stored for any period of time, they should be unbundled and stood on end against an interior wall. Metal should be spread or fanned out at their bottom ends to allow for air circulation and should be off the ground on blocks. If storage is to be for a day or two, keep the metal inside inside in the bundle up off the ground on blocks. Never cover the material with plastic as this promotes sweating. Failure to follow these steps may result in wet storage stain and premature white rusting, which the manufacturer cannot be held responsible for.

### Cutting

When using a power saw to cut metal panels several precautions should be taken. Place the bottom {interior} surface of the sheets up and cover with a tarp to protect the top {exterior} surface from the hot metal filings and reduce the chance of damage. When doing the actual cutting, be sure to wear protective eye glasses and do it away from other unused or applied panels. Metal filings may become embedded in the surface of the sheet and if left alone will quickly rust. Be sure to wipe all filling from both surfaces before application

## Returns

There will be no Returns Accepted without a Return Memo and there will a 30% Restocking charge. Material must be wrapped and in saleable condition No Returns after 60 days. Job cut steel will not be available to Return.
